

Life Pacific University's Generative AI Policy (to be included in all Course Outlines)

- As an institution of Biblical Higher Education, we affirm the central importance of developing a student's critical thinking skills and their integrity (both professional and individual) while also acknowledging (and teaching in accordance with) the reality that the successful implementation of AI tools is quickly becoming a core skill required in nearly all fields of professional endeavor. In order to properly understand the best practices and approved uses of these technologies, LPU recommends that *GenAI should be understood along the lines of being a personal assistant/editor rather than a content developer.*
 - In practical application this means that GenAI tools should be seen as supplements to the student's creative/intellectual process (in planning and editing) rather than the executor/developer of their content.
